

January 16, 1984

Mr. Harry Seraydarian, Director
Toxics and Waste Management Division
United States Environmental Protection Agency
Region IX
215 Fremont Street
San Francisco, CA 94105

RE: AZD088301213

Dear Mr. Seraydarian:

As stated in my letter of October 20, 1983, additional soil samples were taken at different levels to better define the boundaries of the hazardous waste contamination at the Union Manufacturing facility.

The report, as prepared by Western Technologies Inc., indicates that contamination in areas A, B, and C is above the 1.0 ft to 2.5 ft level for the parameters and locations tested. A copy of this report and soil analysis summary is enclosed for your records.

It is our intention to proceed with soil removal during the next five to ten working days. In addition to using the soil analysis summaries, any area(s) showing soil discoloration will be addressed. An independent, registered professional engineer will be present to observe the clean up.

Upon completion, a certification of closure along with copies of the hazardous waste manifests will be submitted.

Should you find any problems with this plan please have a member of your staff notify me immediately at (602) 961-1022.

Sincerely Yours,

Claude B. Siemien
Manufacturing Manager
